

“Award winning Master Painter and Environmental Paint Specialist”

PROFILE 2015 - MIKE BAILEY PAINT GROUP

Snapshot

We are Master Painters and Decorators, offering a premium service in environmental paint solutions, for domestic and commercial properties. We have operated in Melbourne and regional Victoria since 1992 and employ well trained in-house staff. We are environmental and sustainable paint specialists, working towards a “Greener” Australia, committed to minimizing release of contaminated solvents into our environment.

We are compliant with Federal, State and Local Government legislation and use low toxic paint products that can pose health risks to humans. We have introduced and pioneered heat reflective products for Australia that reduce energy bills and greenhouse gas emissions.

As a Master Painter & Decorator

Our work covers private residences, through to commercial buildings. From contemporary new homes, to Heritage listed properties, to major renovations, we can work hours that suit your project and are fully insured. We specialise in decorative finishes, feature walls and creative colour design.

Restoration Work & Lead Paint Removal

As a Master Painter & Decorator, restoration work is a large part of our work. Paint containing lead was used in many buildings. Pre 1970 buildings are most at risk, but those built more recently, may still have some lead.

Roof Restoration & Renovation

We use exclusively Energy Star heat reflective exterior paints for roof and gutter restoration which can save on energy bills and lower external surface temperatures. Energy Star comes in 40 colours and suitable for homes to warehouses. We offer a 5-year guarantee on product and workmanship.

Fire Resistant Coatings for Passive Fire Protection

More recently heritage and older buildings can find fire rating solutions where original ceilings and walls can be restored rather than replaced. We use CAP Fire Resistant Coatings that are the next generation of Intumescent water based coatings for “passive fire protection”. This is a water based thin film with an acrylic fire resistant component, designed to protect surfaces from fire by developing a thick char barrier when exposed to high temperatures or flame.

Quotations and Projects

Our website provides easy access to on-line quotations and client profiles

Our work environments
